

## Subject: Tonsillitis, acute

### Case study

A 10-year-old boy presented with acute tonsillitis, experiencing a sore throat, fever, and difficulty swallowing for three days. His medical history included frequent throat infections, and he had been treated with antibiotics previously. While the standard therapy helped reduce his fever, fatigue and mild discomfort persisted, impacting his energy at school and playtime.

Seeking complementary options, his parents explored bioresonance therapy to help restore his son's energy levels. Bioresonance analysis indicated subtle energy imbalances related to the throat and immune system. The therapy sessions focused on harmonizing cell frequencies and fostering healing at the cellular level. Over multiple sessions in conjunction with his prescribed medication, gradual symptom relief was observed. The child felt more energized, and his parents reported improved overall well-being and resilience to subsequent minor infections. This integrative approach did not replace conventional care but aimed at restoring his body's energy balance to support recovery and comfort.

### Bioresonance treatment program:

<b>37.14 Tonsillitis, acute</b>	<b>Time</b>
00.00 Analysis preparation	5 min
01.00 Vitalisation complete	5 min
02.00 Acupuncture Meridians complete	5 min
31.25 ATP production lymph	5 min
35.10 Raising the defence capacity, basic program	5 min
70.16 Upper respiratory system	10 min
36.00 Lymphatic system physiology complete	5 min
37.12 Lymphadenitis, swelling of a lymph node	5 min
37.13 Lymph flow disorder	5 min
37.14 Tonsillitis, acute	5 min

43.17 Pharyngitis .....	5 min
31.50 Basic detoxification program .....	5 min
01.00 Vitalisation complete .....	5 min
