

Subject: Kidney failure

Case study

A 68-year-old man with a history of hypertension and type 2 diabetes presented with worsening fatigue, swelling in his lower extremities, and decreased urine output. He was hospitalized and diagnosed with stage 4 chronic kidney disease (CKD). After stabilizing his condition through medication and dietary management, he sought additional support to manage persistent fatigue and improve his general well-being.

Bioresonance therapy was introduced as a complementary option. An assessment of his body's energy fields with Bioresonance analysis highlighted energetic disturbances related to kidney function. Over the course of several sessions, treatment focused on harmonizing cell frequencies and fostered energy balance alongside his medical regimen. While kidney function remained stable, the patient reported increased vitality, reduced swelling, and a more optimistic outlook. This case underscores how bioresonance, when combined with traditional treatment, may help restore overall energy balance and support quality of life in CKD patients.

Bioresonance treatment program:

45.05 Kidney failure	Time
00.00 Analysis preparation	5 min
01.00 Vitalisation complete	5 min
02.00 Acupuncture Meridians complete	5 min
31.23 ATP production kidney	5 min
31.87 Oedemata	5 min
35.10 Raising the defence capacity, basic program.....	5 min
44.10 Kidney complete	5 min
44.17 Renal glomeruli.....	5 min
70.21 Kidneys, ureter.....	10 min

45.05 Kidney failure.....	5 min
45.10 Glomerulonephritis	5 min
45.80 Water removal	5 min
31.51 Detoxification blood system	5 min
31.52 Detoxification lymphatic system.....	5 min
31.62 Detoxification kidney.....	5 min
01.00 Vitalisation complete	5 min
