

## Subject: Glomerulopathy

### Case study

A 54-year-old man presented with swelling in his legs and fatigue, eventually diagnosed with glomerulopathy following renal biopsy. He had a long history of hypertension, controlled with medication, and recently developed proteinuria. Standard management included ACE inhibitors, diuretics, and dietary adjustments, resulting in some improvement, but persistent low energy and intermittent swelling remained.

Seeking increased well-being, he explored bioresonance therapy. Initial energetic testing indicated disturbances at the cellular frequency level and an energy deficit in the kidney meridian. A personalized plan was devised to complement his ongoing medication. Treatment sessions focused on harmonizing cell frequencies and supporting energy balance in kidney pathways. Over several weeks, he reported increased vitality, improved sleep, and reduced swelling frequency. While traditional therapies continued, bioresonance provided additional support, fostering a greater sense of balance and well-being.

### Bioresonance treatment program:

| <b>45.16 Glomerulopathy .....</b>                      | <b>Time</b> |
|--------------------------------------------------------|-------------|
| 00.00 Analysis preparation .....                       | 5 min       |
| 01.00 Vitalisation complete .....                      | 5 min       |
| 02.00 Acupuncture Meridians complete .....             | 5 min       |
| 31.23 ATP production kidney .....                      | 5 min       |
| 35.10 Raising the defence capacity, basic program..... | 5 min       |
| 31.87 Oedemata .....                                   | 5 min       |
| 70.21 Kidneys, ureter.....                             | 10 min      |
| 44.10 Kidney complete .....                            | 5 min       |
| 44.17 Renal glomeruli.....                             | 5 min       |

|                                          |       |
