

## Subject: Gastric ulcer

### Case study

A 54-year-old teacher experienced recurrent epigastric pain and indigestion, which was later diagnosed as a gastric ulcer following an endoscopic examination. Despite standard treatment with proton pump inhibitors and dietary adjustments, she continued to struggle with fatigue, poor appetite, and anxiety over food choices. Keen to complement her existing care plan, she chose to try bioresonance therapy after hearing about its supportive approach to restoring overall energy balance.

Bioresonance analysis highlighted energetic imbalances, pointing to both cellular stress and a disturbance in her energetic fields. Sessions focused on harmonizing her body's frequencies and supporting energy regulation. Over the course of several weeks, she reported improvements in energy, digestion, and mood. While her ulcer required ongoing medical supervision, bioresonance therapy appeared to foster healing at the cellular level and promote a sense of wellbeing, all without noted side effects. Her case highlights the value of a cause-oriented, energy-based support alongside conventional treatment.

### Bioresonance treatment program:

<b>47.40 Gastric ulcer.....</b>	<b>Time</b>
00.00 Analysis preparation.....	5 min
01.00 Vitalisation complete .....	5 min
02.00 Acupuncture Meridians complete .....	5 min
31.13 ATP production stomach.....	5 min
31.70 Degeneration cellular tissue.....	5 min
35.10 Raising the defence capacity, basic program.....	5 min
70.19 Digestive organs.....	10 min
70.41 Helicobacter pylori infection .....	10 min
46.30 Stomach complete.....	5 min

46.40 Small intestines complete .....	5 min
47.40 Gastric ulcer.....	5 min
31.50 Basic detoxification program .....	5 min
01.00 Vitalisation complete .....	5 min
