

Subject: Duodenal ulcer

Case study

A 48-year-old man with a history of duodenal ulcer experienced recurring epigastric pain, bloating, and fatigue. Despite a successful initial course of proton pump inhibitors and antibiotics for H. pylori eradication, he continued to report milder but persistent digestive discomfort and anxiety regarding relapse. Eager to address the root causes of his lingering symptoms, he sought integrative care, including bioresonance therapy.

Energetic analysis identified an imbalance in his gastrointestinal energy patterns, suggesting areas of energy disturbance. Personalized bioresonance sessions were started to help restore overall energy balance and harmonize cell frequencies. Nutritional support and stress reduction strategies complemented therapy. Gradually, the patient reported greater well-being, improved digestion, and a sense of emotional stability. While conventional medicine remained his foundation, bioresonance therapy provided energetic support that enhanced his confidence and quality of life without any side effects.

Bioresonance treatment program:

47.45 Duodenal ulcer	Time
00.00 Analysis preparation	5 min
01.00 Vitalisation complete	5 min
02.00 Acupuncture Meridians complete	5 min
30.92 Mucous membranes, trunk	5 min
31.16 ATP production small intestines	5 min
35.10 Raising the defence capacity, basic program	5 min
31.70 Degeneration cellular tissue	5 min
70.19 Digestive organs	10 min
70.41 Helicobacter pylori infection	10 min

46.30 Stomach complete.....	5 min
46.40 Small intestines complete	5 min
47.45 Duodenal ulcer	5 min
31.50 Basic detoxification program	5 min
01.00 Vitalisation complete	5 min
