

Subject: Ulcerative colitis

Case study

A 42-year-old teacher with a five-year history of ulcerative colitis experienced persistent flare-ups despite standard medications, including mesalamine and occasional corticosteroids. She often reported abdominal cramping, urgency, and fatigue. Frustrated by the cyclical nature of her symptoms, she sought additional support and turned to bioresonance therapy as a complement to her medical care.

Initial energetic assessments using bioresonance analysis suggested imbalances in her digestive tract's energy fields. Personalized treatment focused on harmonizing cellular energy, reducing energetic disturbances, and providing overall energetic support. Over several sessions, she noted reduced abdominal discomfort and improved overall well-being. While her medical regimen continued, energy-based monitoring and bioresonance sessions provided a safer route for restoring well-being and fostering cellular balance. The integrative approach helped her better manage symptoms and contributed to a sense of renewed hope and energy.

Bioresonance treatment program:

47.60 Ulcerative colitis	Time
00.00 Analysis preparation.....	5 min
01.00 Vitalisation complete	5 min
02.00 Acupuncture Meridians complete	5 min
30.92 Mucous membranes, trunk	5 min
31.12 ATP production colon	5 min
31.16 ATP production small intestines.....	5 min
31.70 Degeneration cellular tissue.....	5 min
35.10 Raising the defence capacity, basic program.....	5 min
70.19 Digestive organs.....	10 min
46.00 Digestive system, physiology complete	5 min

47.60	Ulcerative colitis	5 min
64.55	Adrenal cortex	5 min
75.10	Stress reduction.....	5 min
31.50	Basic detoxification program	5 min
01.00	Vitalisation complete	5 min
