

# Subject: Retinal detachment

## Case study

A 64-year-old man experienced sudden vision loss and flashes of light in his left eye. He was diagnosed with retinal detachment following assessment by an ophthalmologist and underwent emergency surgery. Despite the initial reattachment, he continued to experience visual disturbances and anxiety regarding possible recurrence. Seeking additional support, he explored adjunctive therapies and was introduced to bioresonance sessions to help address his general well-being.

Energetic analysis was performed, revealing a notable energy disturbance in ocular and central nervous system fields. The approach focused on harmonizing cell frequencies and restoring overall energy balance. Through a series of bioresonance treatments, there was a gradual reduction in eye strain and reported improvement in energy levels and quality of sleep. While no direct claims are made regarding retinal healing, the therapy reinforced his recovery journey and supported emotional resilience, demonstrating how bioresonance can complement conventional care to support holistic wellness.

## Bioresonance treatment program:

<b>57.10 Retinal detachment.....</b>	<b>Time</b>
00.00 Analysis preparation.....	5 min
01.00 Vitalisation complete .....	5 min
02.00 Acupuncture Meridians complete .....	5 min
31.31 ATP production eyes .....	5 min
35.10 Raising the defence capacity, basic program.....	5 min
70.12 Eye system .....	10 min
56.00 Organ of vision, physiology complete .....	5 min
57.10 Retinal detachment.....	5 min
31.50 Basic detoxification program .....	5 min
01.00 Vitalisation complete .....	5 min
