

Subject: Cataract

Case study

A 74-year-old retired teacher struggled with gradually worsening vision due to cataracts, making daily tasks and reading increasingly difficult. Following cataract diagnosis, she underwent standard surgical intervention in her left eye. While the surgery provided partial visual improvement, she reported continued discomfort, including sensitivity to light and eye strain, affecting her overall well-being.

Seeking ways to complement her recovery and improve her comfort, she explored integrative therapies and was introduced to bioresonance therapy. Initial energetic testing suggested an "energy deficit" around her ocular region, and sessions focused on harmonizing cellular frequencies to foster healing at the cellular level. The therapy aimed to "restore overall energy balance" and support her natural healing process, in tandem with conventional follow-ups. After several bioresonance sessions, the patient noted reduced eye discomfort, steadier energy, and greater emotional resilience. Although her vision was not fully restored, she expressed greater quality of life and confidence managing her condition.

Bioresonance treatment program:

57.20 Cataract	Time
00.00 Analysis preparation.....	5 min
01.00 Vitalisation complete	5 min
02.00 Acupuncture Meridians complete	5 min
31.31 ATP production eyes	5 min
35.10 Raising the defence capacity, basic program.....	5 min
70.12 Eye system	10 min
56.00 Organ of vision, physiology complete	5 min
56.40 Lens, pupil, vitreous body complete.....	5 min
57.20 Cataract.....	5 min
31.50 Basic detoxification program	5 min

01.00 Vitalisation complete5 min
